5 Things You Must Know Before Purchasing Air Conditioning In Perth

infiniti air

01. Which Type of Air Conditioner?

There are 3 main types of Air Conditioning Systems:

- Evaporative,
- Split System and
- Reverse Cycle Ducted Air Conditioning.

Of these 3, **Reverse Cycle Ducted Air Conditioning** is the only comprehensive solution that gives you year around control and comfort.

02. Perth's Unique Climate

The intensity of Perth's Summer heatwaves (multiple days in excess of 35 degrees celsius) is unique to Perth. Many foreign designed Reverse Cycle Ducted Air Conditioning units are simply not built to cope with this type of heat. As a result they fail to perform when you need them most.

03. Efficiency of Unit

Cheaper Reverse Cycle Ducted Air Conditioning units tend to be made with inferior components and design. As a result they can be expensive to run. This is especially the case in Perth's hot summers – where our hot climate will test your unit like nowhere else.

04. Ongoing Support & Maintenance

Even the best Reverse Cycle Ducted Air Conditioning units need periodic care and maintenance. Ensure you choose a supplier who can back up their installation with dedicated ongoing support and maintenance with good pricing and expert servicing.

05. Experienced Installer

Find an experienced installer who knows about the Perth Air Conditioning industry. An expert will know what works and what doesn't in Perth. Make sure they have a proven track record of happy customers which will indicate they supply quality Air Conditioning and not just the brands that give them the best margins.
